

For sheet metal parts with a thickness from 0.3 mm to 5 mm

The precision levelers of the EcoMaster series deliver consistently high-quality leveling results, especially when working with smaller, more delicate sheet metal parts. Achieve better results in subsequent processes with flat and stress free parts. The EcoMaster is user friendly and easy to maintain, ensuring efficient operation.

Application in the aerospace industry

The ARKU EcoMaster aerospace design was specifically developed for leveling parts in the aerospace industry. The high-strength and light materials need to be processed in a chilled state. Important machine components can corrode in levelers with a rudimentary design.

The affected components in the EcoMaster are protected against corrosion. This allows the machine to deliver consistently good and reliable leveling results.
