

To achieve a high-quality, uniform deburring of flat parts which also have complicated contours, then planetary head technology is the solution. The work piece is processed from all directions. The brushing tools wear uniformly. Depending on the tools used and the number of heads, you can choose between light deburring or rounding edges. The FST machine range is available with one or more heads depending on the application at hand. Belt sanding units can also be used if required.

## Models

**FST 200 KP**

*Deburring machine 2 stations, belt + planetary brush head, 200mm width, wet, extra options*

**FST 200 PPP**

*Deburring machine 3 stations, 200mm width, wet, turning of parts, extra options*
