

Features

The Rhino Hammer makes removing tabbed parts much easier after they are cut. It uses shop air to create impact vibration that breaks the tab loose, leaving the finished parts in good condition. A unique polyurethane tip handles the air pressure necessary for removal of parts.

Specifications

- Reduces time and effort necessary to remove parts from the nest
- Works on different types and thicknesses of material
- Replaceable polyurethane tip does not mar parts
- Compact and easy to grip
- Air pressure can be regulated to reduce vibration force
